

Chapter 7 Review:

- Admission, transfer, and discharge of a resident
- 5 Vital signs
- Normal ranges of oral temperature, adult pulse, adult respirations, and blood pressure
- Each temperature route and corresponding body part
- Types of thermometers and the process of using each of them
- How to measure a radial pulse and respirations
- Body locations where a pulse can be measured
- Blood pressure (systolic and diastolic)
- How to manually measure a blood pressure
- Hypotension and Hypertension
- Pulse oximeter
- Pain management (observing and reporting pain and providing pain management)
- Measuring weight and height of an ambulatory resident
- Restraints and how to promote a restraint-free environment
- Intake/Output and fluid balance
- Measuring urine output
- Collecting a routine urine specimen vs collecting a clean-catch urine specimen
- Collecting a stool specimen
- Providing catheter care and emptying the catheter drainage bag
- What can or cannot be placed on an overbed table
- Oxygen therapy
- IV therapy (What a CNA can do with an IV site)
- Bedmaking (making an occupied bed vs making an unoccupied bed)
- Closed bed vs open bed
- Definition of a non-sterile dressing
- Elastic bandages
