

Converge Buy Button User Guide

Buy. Donate. Give. Pay.

The Converge Buy Button, allows you to create a clickable button or a text link which can be added to any email, webpage or social media post. Once implemented, your customer will be able to use the button or link to make a payment on your Converge Hosted Payment Page.

Requirements

In order to use the buy button feature, you will need:

1. to be approved for an internet processing account; and
2. An API user account ID to be created for your account

Please contact Elavon's customer service team to set up your API user account. You can reach us 24/7 at **1-800-377-3962**.

Getting Started

Once you have the required internet processing account and API user ID, you'll need to set up your Hosted Payment Page. This is the payment page your customers will see once they click on your button or link. The page enables your customer to input their card information and make a payment.

Customizing Your Converge Hosted Payment Page

Everything you need to customize your Converge Hosted Payment Page is built directly into Converge. Simply navigate to the Hosted Payments menu by going to Settings, and scrolling down to “Hosted Payments.”

The image shows two screenshots from the Converge application. The top screenshot displays the 'Settings' menu on the left, with 'Settings' selected. The main content area shows various configuration options: 'Email Setup', 'Payment Form', 'Enabled Value Services' (including 'Invoices & Quotes'), 'Advanced API Settings' (containing 'Buy Button', 'Hosted Payments', and 'Payment Extensions'), and 'MerchantConnect'. The 'Buy Button' option is highlighted with a red rectangle. The bottom screenshot shows the 'Hosted Payments' setup screen, titled 'Which solution is right for you?'. It presents two options: 'Payment Modal' and 'Payment Page'. The 'Payment Page' option is highlighted with a red rectangle, and its corresponding 'SETUP' button is also highlighted with a red rectangle.

Click on the green “SETUP” button next to Payment Page.

Payment Page

On the left side of the screen, you will see a preview of the page. To the right, you will see a series of fields that you can customize. As you make your changes, you will see the updates to your left. By clicking the “Preview Payment Page” button to the top right, you’ll be able to see a streamlined final version of your payment page. Once you’re happy with your changes, you can click “SAVE” in the bottom of the page and move on to customizing the Response Page.

The screenshot displays the Converge Payment Page customization interface. On the left is a dark sidebar with navigation links: Payments, Recurring, Invoices & Quotes, Analytics, Customers, Products, Employees, Settings (highlighted), Account, Help, and MerchantConnect. The main area is titled 'Settings | Hosted Payments' and includes a search bar and terminal information (NextGen Internet Demo, ElavonPN). Below this is a tabbed interface with 'PAYMENT PAGE' and 'RESPONSE PAGE'. The 'PAYMENT PAGE' tab shows a preview of a payment page for 'Converge Test Site'. The preview includes a message about a forgotten item, a 'Secure Order Summary' box, a 'Buy Now' button, an Apple Pay button, and PayPal buttons. To the right of the preview are customization fields: Order Summary, Payment, Billing Address, Shipping Address, Custom Section, Company Logo, Theme (Default), Button Text (Buy Now), Header Text (Verdana, 20, Bold, Italic, Underline), and a footer text 'Converge Test Site'. At the bottom right, there are 'CANCEL' and 'SAVE' buttons. A red box highlights the 'PREVIEW PAYMENT PAGE' button in the top right corner, and another red box highlights the 'SAVE' button at the bottom right.

Response Page

To toggle to the Response Page, please navigate to the top of the page. In the White Bar on top, you'll see the option to click to view the Response Page. This page enables you to customize all of the possible options your customer will see upon submitting their payment. They will either see an approval or a decline. Please make sure you customize all of the possible response pages and provide a redirect URL. This will redirect customers to the website of your choice once they complete their payment. Please remember to save your progress! Once you've completed setting up your payment page, then you're ready to start sending creating buy buttons or buy links.

The screenshot shows the Converge Hosted Payments settings interface. On the left is a dark sidebar with navigation links: Payments, Recurring, Invoices & Quotes, Analytics, Customers, Products, Employees, Settings (highlighted), Account, Help, and MerchantConnect. The main content area has a top bar with 'Search payments', 'Terminal: NextGen Internet Demo', and 'ElavonPN'. Below this is a breadcrumb trail '< Settings | Hosted Payments' and a language dropdown set to 'ENGLISH'. A tab bar shows 'PAYMENT PAGE' and 'RESPONSE PAGE' (the active tab, highlighted with a red box). The 'Response Page' section has a 'PREVIEW RESPONSE PAGE' button. Below the title, a red box highlights three tabs: 'APPROVAL PAGE' (active), 'DECLINE PAGE', and 'REDIRECT URL'. The main content area displays a preview of the response page layout, including a 'Thank you! Here's a summary of your order below.' message, a 2x2 grid of sections (Secure Order Summary, Billing Address, Confirmation, Shipping Address), and a right-hand sidebar with expandable sections: Confirmation, Order Summary, Billing Address, Shipping Address, and Custom Section. Below these are fields for 'Button Text' (containing 'Payment accepted! Click here to complete.') and 'Button Link' (containing 'https://www.amazon.ca/'). A checkbox for 'Include Transaction Data' is checked. At the bottom are 'CANCEL' and 'SAVE' buttons.

Creating a Payment Button

To create a Payment Button or Payment Link, please go to Settings > Buy Button (under Advanced API Settings) and Click “New” on the top right hand corner to create a Buy Button.

The screenshot displays the Converge payment system interface. The left sidebar contains navigation options: Payments, Recurring, Invoices & Quotes, Analytics, Customers, Products, Employees, Settings (highlighted), Account, Help, and MerchantConnect. The main content area shows the 'Settings' menu with options like Email Setup, Payment Form, Invoices & Quotes, Buy Button (highlighted with a red box), and Hosted Payments. The 'Buy Button' section is expanded, showing a table of existing buttons and a 'NEW' button in the top right corner (also highlighted with a red box).

☐	Date Created ▲	Type	Channel	Amount	Status
☐	2018-04-24 13:12:08	Button	Web	0	Active
☐	2018-04-20 08:40:43	Button	Web	7.00	Active
☐	2018-04-20 08:26:47	Button	Web	7.00	Active
☐	2018-04-19 14:15:02	Hyperlink	Web	0	Active
☐	2018-04-19 13:47:11	Button	Web	0	Active
☐	2018-04-19 13:37:27	Button	Web	0	Active

The 'Buy Button' settings page includes a 'Button Design' section with options for Channel (Web selected), Amount, Transaction Type (Sale), and API User (api_user). A preview of the 'Buy Now' button is shown. A note at the bottom states: 'To configure the hosted payment page, go to Settings > Hosted Payments'.

You should arrive on the Buy Button screen. Here, you can make the customizations you need to create the button or link that's right for you.

Select Your Channel

Selecting channels helps you keep a track of your Buy Buttons/Links. It also sets an expiry date depending on the channel selected. If you intend to use a buy button/link on a website such as Facebook or Twitter to redirect them to your hosted payment page, select 'Web'. The button/link created will have no expiry date.

If you intend to use a buy button/link in an email to redirect them to your hosted payment page, select 'Email'. The button created will expire in 30 days after generating the button/link.

Button Design

Channel ☒ Web ☐ Email

Enter Your Amount

You can customize what amount you want to charge your customer. If you leave this item blank, then the customer is free to set the amount they'd like to pay. Leaving it blank is a great option for organizations looking to collect donations. If you enter an amount, then your customer will only be charged the amount listed. There will not be a way to change this amount on the customer's end.

Please note, the currency your customer will be charged is based on where your company is based according to your Elavon application. If your company is based in Chicago, Illinois, and a customer from Toronto clicks on this button, then they will be charged \$25 USD + any exchange fees from their card company. You will receive \$25 USD in your merchant account.

Amount

Transaction Type and API User

Transaction Type should be marked as "Sale."

API User helps Converge differentiate which Website is allowed to process this button's payment. If you don't have an API User to associate with the button, please call customer support so they can help create an API User for you. You can reach our customer support line 24/7 at 1-800-377-3962.

Transaction Type	API User
Sale	api_user

Type

Type asks you to choose between a button and a hyperlink. Buttons are great for websites and emails since it generates a clickable button that you can customize to draw attention to a certain part of a webpage. Links are great to add to a line of text and it is also a great back up. Some website content management systems and some social media posts don't allow for buttons. In these cases, you may use the hyperlink option to direct your customers to your Converge Hosted Payment Page despite those restrictions.

Type ☒ Button ☐ Hyperlink

Customizing the Button

You can change the Button Text to say what you like. In this example, we'll change the text to say "Donate Today" and have it be a specific shade of purple.

You can add your own button color by inputting the HEX code. There are plenty of websites online that can help you pinpoint the Hex code that corresponds to the color that you're after. We recommend <https://htmlcolorcodes.com/> if you need help getting started. In this example, we'll change the button to a shade of purple.

The screenshot shows the 'converge' interface for customizing a button. On the left is a dark sidebar with navigation links: Payments, Recurring, Invoices & Quotes, Analytics, Customers, Products, Employees, Settings (highlighted with a gear icon), Account, Help, and MerchantConnect. The main area is titled 'Button Design' and contains several settings:

- Channel:** Radio buttons for 'Web' (selected) and 'Email'.
- Amount:** An empty input field.
- Transaction Type:** A dropdown menu set to 'Sale'.
- API User:** A dropdown menu set to 'api_user'.
- Type:** Radio buttons for 'Button' (selected) and 'Hyperlink'.
- Button Text:** A text input field containing 'Donate Now'.
- Button Color:** A text input field containing the hex code '8E44AD'.
- Button Font:** A dropdown menu set to 'Verdana'.
- Font Size:** A dropdown menu set to '18'.
- Button Text Color:** A text input field containing the hex code 'F8F9F9'.

On the right side of the 'Button Design' section, there is a 'Preview' box showing a purple button with the text 'Donate Now'. Below the preview, a note states: 'To configure the hosted payment page, go to Settings > Hosted Payments'. Underneath this is a code block containing HTML and JavaScript code for the button. At the bottom right of the code block is a 'COPY TO CLIPBOARD' button. At the bottom of the 'Button Design' section are two buttons: 'CANCEL' and 'GENERATE BUTTON'.

Once you're happy with your button, please click on the green "GENERATE BUTTON" on the bottom. You will see a string of code automatically generated for you. Simply click "COPY TO CLIPBOARD" to copy the code and paste it into your website, email or social media posting.

Please note, if you make any changes after you click "GENERATE BUTTON," then you will need to click that button again to refresh the code.

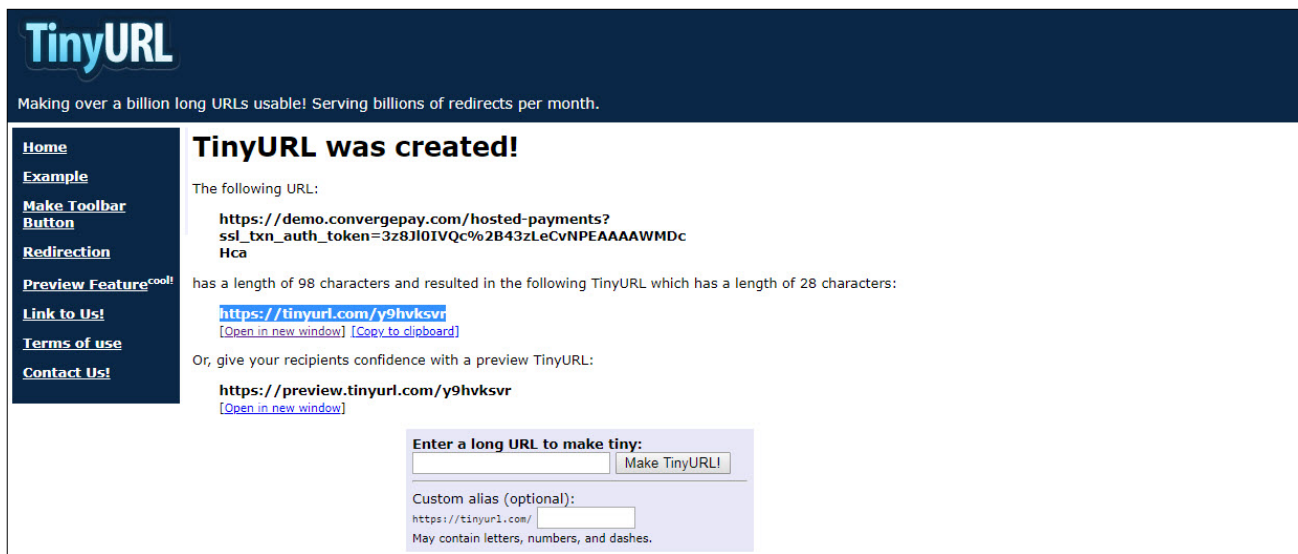

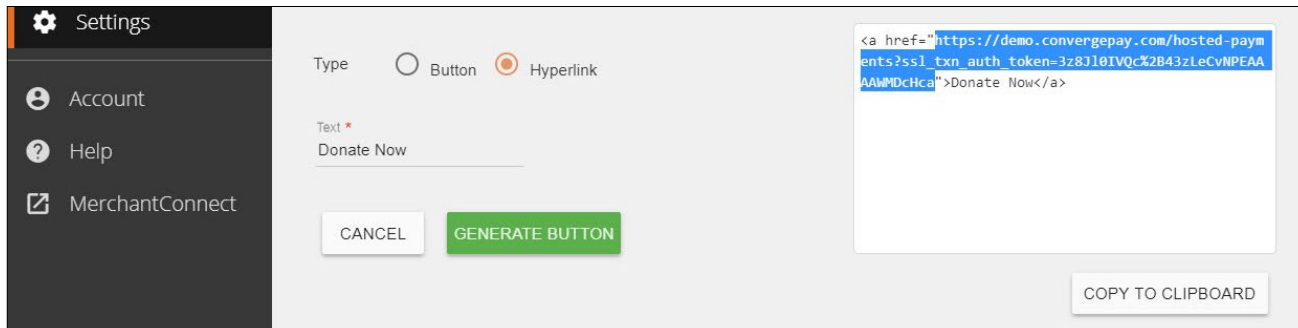

Customizing a Hyperlink

Hyperlinks are very simple to customize. You simply have to change the text, and click “GENERATE BUTTON” when you are ready. Again, you will need to click the “COPY TO CLIPBOARD” button to pick up all of the code – which you will need to paste into your website, email or social media post.

Please note, if you make any changes after you click “GENERATE BUTTON,” then you will need to click that button again to refresh the code.

The screenshot shows the Converge Buy Button settings interface. On the left is a dark sidebar with the Converge logo and navigation links: Payments, Recurring, Invoices & Quotes, Analytics, Customers, Products, Employees, Settings (highlighted), Account, Help, and MerchantConnect. The main content area is titled "Settings | Buy Button". It includes a search bar "Search payments" and terminal information "Terminal : NextGen Internet Demo" and "ElavonPN". The "Button Design" section has "Channel" set to "Web" (radio button selected) and "Email" (radio button unselected). There is an "Amount" input field. "Transaction Type" is set to "Sale" and "API User" is set to "api_user". The "Type" section has "Button" (radio button unselected) and "Hyperlink" (radio button selected). The "Text" field contains "Donate Now". At the bottom left are "CANCEL" and "GENERATE BUTTON" buttons. On the right, there is a "Preview" box showing a button labeled "Donate Now". Below the preview, it says "To configure the hosted payment page, go to Settings > Hosted Payments". At the bottom right is a "COPY TO CLIPBOARD" button. A code block shows the generated HTML: `<a href="https://demo.convergepay.com/hosted-payments?ssl_txn_auth_token=3z8J10IVQc%2B43zLeCvNPEAAANMDChca">Donate Now</a>`

If the code is too long and you need just a shortened URL link, then you can copy just the URL which is in between the parenthesis in the code and paste it into a tiny URL generator.

To test the shortened URL, simply paste the new URL into your web browser. You should see the Converge Hosted Payment Page that you created.
